

REVOLUTIONIZING COGNITIVE ASSESSMENT

In 15 minutes the patent-pending MindPulse precision digital cognitive assessment provides clinicians objective insight into an individual's executive function status.

Diagnose earlier

MindPulse assesses decision-making and executive function issues allowing for detection before symptoms appear.

Reduce false positives

Differentiate between motor slowdown and executive function pathology in aging populations for a more accurate diagnosis.

Telemedicine-friendly

A modern assessment solution, MindPulse can be easily administered via telemedicine by personnel without special training.

MindPulse is a digital assessment tool for patients aged 13 to 80. It measures cognitive abilities, specifically attentional and executive functions involved in making context-adapted decisions. It offers a unique breakdown of the deep elements of decision-making.

MindPulse Users:

- Physicians
- Psychiatrists
- Psychologists
- Geriatricians
- Nurse Practitioners
- Speech Therapists

Diagnosis and Assessment:

- Neurodegenerative Dementia
- Anxiety / Depression
- Long COVID
- Mild Cognitive Impairment
- Soldier/First Responder Readiness
- Driving Ability Assessment
- Pilot Readiness
- Fatigue Assessment

Clinical Trials Support:

- Baseline Assessment
- Point-in-time Assessment
- Trending Assessment

Based on a complex mathematical model that measures reaction time to the 100th of a second.
